Optical Lens Technology Has its Eye on Us

Optical lens technology has its eye on us. The technology is being developed by a team of researchers at the University of California, Berkeley. The researchers are developing a smart contact lens that can record and play video. The lens is made of a transparent material and is only a few micrometers thick. It can be implanted in the eye and can record video of the surrounding environment. The lens can also play video back to the user. The researchers are currently testing the lens in animals and hope to have a human trial in the near future.

UNIVERSITY of HOUSTON

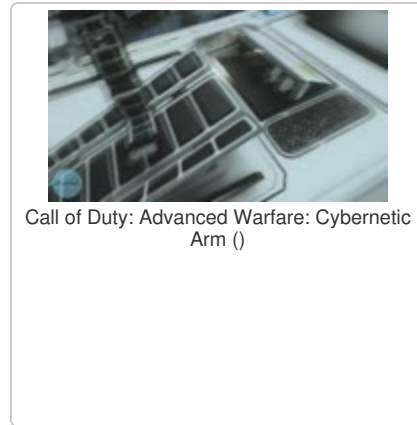

Researchers Build Brain-Machine Interface to Control Prosthetic Hand

Researchers at the University of Houston have developed a brain-machine interface that allows a person to control a prosthetic hand using their thoughts. The interface is based on a neural prosthesis that is implanted in the brain and connected to a computer. The computer then sends signals to the prosthetic hand, allowing the person to control it. This is a significant step forward in the development of prosthetics and could help many people who have lost limbs to regain some of their independence.

Amputee Pop Star Viktoria Modesta Doesn't Care If You're Uncomfortable

Viktoria Modesta is a pop star who is also an amputee. She has a prosthetic right leg. She is known for her unique style and her music. She has performed at many major venues and has a large following. She is a role model for many people who are amputees. She has shown that it is possible to be a successful pop star and to be an amputee. She has inspired many people and has shown that there are no limits to what you can achieve. She is a true inspiration and a role model for everyone.
