What is a Smart City? How AI is Going Uptown Around the Globe

By [Author Name]

Smart cities are a reality that will be a major part of our lives in the future. They will be cities that are more efficient, more sustainable, and more secure. They will be cities that are more connected, more collaborative, and more innovative. They will be cities that are more resilient, more adaptable, and more resilient. They will be cities that are more inclusive, more equitable, and more just. They will be cities that are more beautiful, more vibrant, and more alive. They will be cities that are more than just a collection of buildings and roads. They will be cities that are a reflection of our values, our dreams, and our hopes for the future.
